### The GardenAfrica Team

Our small team of staff works closely with partner organisations, with support from researchers, advisors and volunteers.

Activities involve: Supporting and developing pioneering projects, strategic planning, networking, fundraising and financial management. As well as raising awareness to promote bio-cultural diversity, with a view to improving the sustainable management of botanical resources for those who depend upon them for health and livelihoods.

Community initiatives and field projects are developed with partner organisations in Africa; while advocacy and fundraising takes place mostly in Europe.

Most of our team are based in London and live within walking or cycling distance of work; some are home-based.
